

Powerful New Products Based on Finnish Expertise!

RAITA

EXPERT ON ICE

New nanotech cleaning and coating agents for ice rink plastic surfaces. Only from Raita.

RAITA CLEANER™

RAITA CLEANER™ is designed for the cleaning of puck and stick marks. It contains mark removal elements that reduce the need for scrubbing. Apply **RAITA CLEANER™** on the plastic surface by spraying and remove the marks by rubbing gently with a microfibre cloth. It's easy and fast!

Clean plastic surfaces ensure the best possible view for spectators and will enhance ice rink users comfort.

*To improve player safety, the shielding of dasher boards has switched to flexible and lightweight polycarbonate and acrylic materials. Compared to tempered glass, it has proved to be more challenging to clean puck and stick marks off these plastic surfaces. Thanks to our state-of-the-art nanotechnology know-how, the purpose-developed **RAITA CLEANER™** and **RAITA SURFACER™** are now available for cleaning these challenging and valuable plastic surfaces. Clean plastic surfaces ensure the best possible view for spectators and will enhance ice rink users comfort.*

RAITA SURFACER™

*We recommend coating the cleaned plastic surface with **RAITA SURFACER™**. It strengthens the cleaned surface against scratches and enhances its shine and dirt-resistance. After the treatment with **RAITA SURFACER™**, the plastic surface will be even easier to clean the next time.*
